## **DETAILED ACTION**

### ***Drawings***

1. The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81. No new matter may be introduced in the required drawing.

### ***Specification***

2. The spacing of the lines of the specification is such as to make reading and entry of amendments difficult. New application papers with lines double spaced on good quality paper are required.
3. The disclosure is objected to because of the following informalities: the applicant describes a Figure on the specification, however figures are not present in the disclosure.  
  
Appropriate correction is required.

### ***Claim Objections***

4. The claims are objected to because the lines are crowded too closely together, making reading and entry of amendments difficult. Substitute claims with lines one and one-half or double spaced on good quality paper are required. See 37 CFR 1.52(b).
5. Claim 4 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot be dependent on another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claim 4 not been further treated on the merits.

### ***Claim Rejections - 35 USC § 102***

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2834

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,231,321 to Takiguchi.

8. Takiguchi clearly teaches the construction of a noise suppression system for a permanent-magnet motor (1), in which:

the motor includes supply brushes (26, 27) connected to an external power supply by leads (40, 41), which are associated with inductors (6, 7);

and a metal casing (5), characterized in that:

each brush is connected to the metal casing of the motor through at least one noise suppression capacitor (8),

in that the metal casing of the motor is connected to the vehicle's earth, and

that the metal casing of the motor and the functional device have complementary means (100, added by the examiner for convenience) for earthing the casing.

***Claim Rejections - 35 USC § 103***

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

10. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,231,321 to Takiguchi in view of U.S. Patent No. 5,949,173 to Wille et al.

Takiguchi discloses the claimed invention except for supply leads (10, 11) are formed by ferrite-loaded wires.

Wille et al. teaches the use of ferrite core choke coils on a motor for the purpose of connecting the brushes and the respective current bus bar.

It would have been obvious to one skilled in the art at the time the invention was made to use the ferrite core choke coils disclosed by Wille et al. on the permanent-magnet motor disclosed by Takiguchi for the purpose of connecting the brushes and the respective current bus bar.

***Conclusion***

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pedro J. Cuevas whose telephone number is (703) 308-4904. The examiner can normally be reached on M-F from 8:30 - 6:00.
